Subject: Dead River Dry Year Consultation - 4/4/22 Update

Good Morning,

Water elevations at both the Silver Lake and Dead River Storage Basins had an increasing most of the past week with the above freezing temperatures and the rain/snow mix that was received mid-week. Below are the current water levels and outflows across the Dead River:

Silver Lake:	1477.68'	15 cfs
Hoist:	1336.46'	110 cfs
McClure:	1196.04'	105 cfs

UPPCO continues to remain at license minimum flows from both the Silver Lake and Dead River Storage Basins, and will do so until license minimum elevations are met. To meet the minimum flow requirements of the Silver Lake Storage Basin for April (25cfs or inflow, whichever is less), UPPCO will be adjust the outflows to 20 cfs tomorrow to best match inflow conditions.

The current 10 day forecast shows precipitation occurring early in the week (either rain or snow), with temperature slightly above the freezing mark through most of the work week.

(<https://www.accuweather.com/en/us/negaunee/49866/daily-weather-forecast/338745>).

If you have any questions please let me know. The next update email will be sent on Monday April 11th.

Regards,

Josh Ball
